

Charis Kyritsis

Karditsa, Greece | +30 698 845 9712 | kiritsisxaris@gmail.com | www.linkedin.com/in/charis-kyritsis

Data Science and Machine Learning postgraduate with strong experience in ERP systems, data pipelines, and Python-based automation. Skilled in developing AI-driven solutions that streamline business processes and improve operational decision-making. Experienced in transforming operational data into actionable insights through automation, analytics, and system integration. Passionate about building scalable AI and machine learning solutions that enhance business efficiency and data-driven operations.

EDUCATION

Hellenic Open Univeristy

2023 – Present

Master's Degree, Data Science and Machine Learning

Technological Educational Institute of Epirus

2002 – 2006

Bachelor's Degree, Department of Computer Engineering

EXPERIENCE

Mpakratsas Apostolos LTD

2023 - Present

AI Automations | Business Intelligence Analyst | IT Support | ERP & Business Operations

- Developed AI-powered automation solutions that reduce manual workload and streamline business processes.
- Developed Python-based automation scripts to analyze ERP data and improve operational decision-making.
- Maintained internal IT infrastructure and resolved system issues, ensuring smooth operation for internal users
- Managed ERP financial data pipelines including invoice processing, purchase order tracking and reporting workflows.
- Maintained and optimized ERP system workflows across accounting and production departments, ensuring operational continuity.

Computer Center

2010 - 2023

IT Support | ERP & Business Operations

- Supported ERP system operations for retail ensuring system reliability and resolving operational issues.
- Diagnosed and repaired hardware and software issues for customers across various platforms
- Delivered on-site and remote technical support for individual clients and business environments, processing and analyzing system logs to identify trends and recurring issues
- Provided specialized IT support for Intracom systems and OPAP retail stores, banking institutions (Piraeus Bank, Alpha Bank), and major supermarket chains including Galaxias, Lidl, and Carrefour
- Built and maintained long-term client relationships through responsive, reliable service

Public Educational Institution of karditsa

2008 - 2010

Lecturer in Informatics

- Instructed students in basic and advanced computer skills
- Developed course materials and assessments for IT modules

LANGUAGES

English: First Certificate in English (University of Michigan)

PROJECTS

E-commerce Business Intelligence Dashboard (GCP)

Developed an end-to-end cloud Business Intelligence workflow to analyze and visualize e-commerce transaction data using Google Cloud Platform.

- Designed a scalable analytics pipeline using BigQuery for data storage and SQL-based data modeling
- Implemented data transformation queries to generate sales, revenue, and customer performance metrics
- Built an interactive dashboard in Looker Studio for real-time business insights and KPI monitoring
- Structured datasets to simulate real-world BI reporting scenarios used in enterprise analytics environments

Tech: Python, SQL, Google Cloud Platform, BigQuery, Looker Studio

GitHub: <https://github.com/xariskir/gcp-ecommerce-bi-dashboard>

AI-Powered Invoice Fraud Detection System (Vertex AI)

Developed a cloud-based machine learning pipeline for automated invoice fraud detection using Google Cloud Platform, simulating real-world financial risk analysis systems used in enterprise environments.

- Built a custom XGBoost training pipeline on Google Vertex AI for fraud detection modeling
- Implemented scalable online inference endpoints for real-time prediction using Vertex AI
- Developed a REST API service via Cloud Run to integrate predictions into external applications
- Logged model predictions and operational data into BigQuery for monitoring and analytics
- Created a fraud monitoring dashboard in Looker Studio for real-time anomaly tracking and reporting

Tech: Python, XGBoost, Google Vertex AI, Google Cloud Platform, BigQuery, Cloud Run, Looker Studio

GitHub: <https://github.com/xariskir/ai-invoice-fraud-detection-vertex-ai>

Automated Invoice-to-Loading Form Processing System – In Progress

Developed a Python-based document processing system that converts delivery invoices into standardized logistics loading forms.

- Implemented PDF and CSV data extraction pipelines using pdfplumber and pandas
- Built business logic rules to process shipment data and assign storage constraints
- Automated Excel template population using openpyxl
- Generated final PDF transport forms via LibreOffice integration
- Developed an interactive Streamlit dashboard for data validation and document generation

Tech: Python, Streamlit, pandas, pdfplumber, PyPDF2, openpyxl, LibreOffice

Basketball Analytics Platform (Python, End-to-End Game Analysis System) – In Progress

Developed a full-stack basketball analytics platform featuring a custom event-logging GUI (Tkinter) and an advanced analytics engine for team and player performance evaluation. Implemented advanced metrics including Offensive/Defensive Rating, Net Rating, PER, Usage Rate, Win Probability, Plus-Minus Timeline, and Four Factors analysis. Built automated multi-page professional PDF match reports with dynamic visualizations using Matplotlib, Seaborn, Pandas, and ReportLab.

Tech : Python, Pandas, NumPy, Matplotlib, Seaborn, Tkinter, ReportLab, CSV/JSON-based data

CERIFICATIONS

- Complete Python Developer in 2023: Zero to Mastery - Udemy (2022)
- Math for Data science,Data analysis and Machine Learning Udemy (2023)
- Carrer Essentials In Generative AI - Microsoft and Linkedin (2024)
- Microsoft Certified: Azure AI Fundamentals - Microsoft (2024)
- Data Analytics with SQL & Python - Workearly (2025)

- Data Science Foundations:Fundamentals -Linkedin (2025)
- Learning Data Science: Understanding the Basics -Linkedin (2025)
- Data Visualization with Tableau & Microsoft Power BI – Workearly (2026)

TECHNICAL SKILLS

Programming

Python, R

Data & Analytics

Pandas, NumPy, Data Processing, Data Visualization

Cloud Platforms

Google Cloud Platform (BigQuery, Vertex AI, Cloud Run)

Business Intelligence

Looker Studio, Data Dashboards, Power BI

Tools & Environment

Git, PyCharm, RStudio, Jupyter Notebook, Visual Studio Code

Enterprise Systems

ERP Workflows, Business Process Automation, Financial Systems

LEADERSHIP & ACTIVITIES

Football Referee

- Officiated competitive football matches for 14 years at the national and local level leagues, making real-time decisions in high-pressure environments.
- Managed communication and conflict resolution between players and coaching staff while maintaining rule enforcement and game integrity.
- Developed strong situational awareness, teamwork coordination, and decision-making under pressure.
